Global Balanced Fund

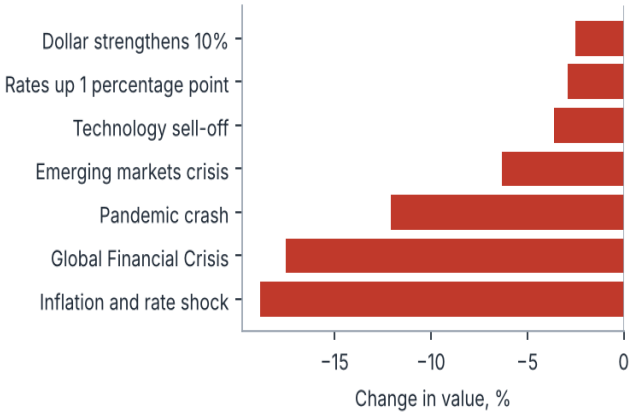

Portfolio report as of 2026-10-23 · generated 29 October 2026, 23:23 UTC

In brief

Global Balanced Fund is worth $10.00m across 11 holdings, split Fixed Income 45%, Equity 44%, Real Estate 4%, Commodity 4%. The largest holding is US Treasury 4.25% 2036 at 20.0% of the portfolio.

The portfolio fell 0.14% on 2026-10-23, to $10.00m. Northwind Technologies helped most ($17,301), while Helix Health held it back (-$20,104). Recent volatility of 11.4% is in line with its long-run level of 10.7%. On a typical bad day (1 in 20) the portfolio could lose about $104,946; on the very worst days the average loss is closer to $134,427. 1 rule breach needs attention. 13.0% of the portfolio would take more than 5 days to sell (limit 10%).

Left: where the money is. Right: how the portfolio would fare in each stress scenario.

Key risk measures

Measure	Value	What it means
Volatility (annual)	10.72%	How much the portfolio typically swings in a year. Higher means a bumpier ride.
Recent volatility (EWMA)	11.42%	Volatility with recent days weighted more heavily, so it reacts faster to change.
Value at Risk (95%, 1 day)	1.05% ($104,946)	On 19 days out of 20, the portfolio should not lose more than this.
Value at Risk (99%, 1 day)	1.44% ($143,618)	On 99 days out of 100, the portfolio should not lose more than this.
Expected Shortfall (95%, 1 day)	1.34% ($134,427)	On the worst 1-in-20 days, this is the average loss. It describes how bad bad days get.
Maximum drawdown	12.62%	The largest fall from a high point before the portfolio recovered.
Beta to benchmark	0.88	If the benchmark moves 1%, the portfolio has tended to move this much.
Tracking error	3.98%	How far, in a typical year, the portfolio's return drifts from the benchmark's.
Diversification ratio	1.50	How much holdings offset one another. 1.0 means no benefit; higher is better.
Effective number of holdings	8.68	How many equally sized holdings would give the same concentration.

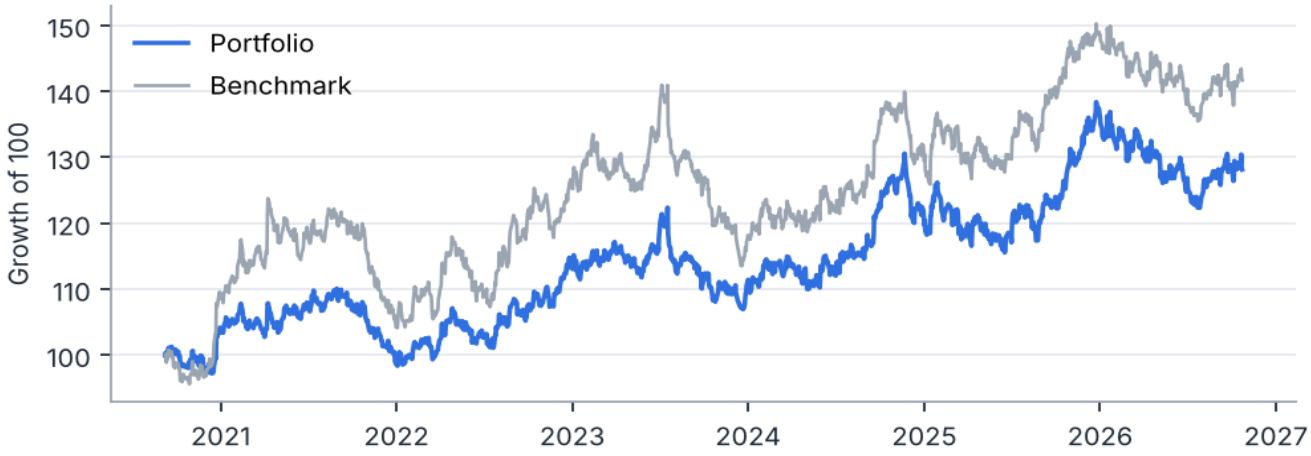

On a typical bad day (1 in 20) the portfolio could lose about $104,946; on the very worst days the average loss is closer to $134,427.

If all interest rates rose by 1 percentage point, the bonds would lose about $300,841 (3.01% of the portfolio).

Where the risk comes from

Holding	Share of money	Share of risk
Northwind Technologies	10.0%	23.4%
Emerging Markets Equity ETF	9.0%	16.1%
Kestrel Industrials	7.0%	13.0%
Helix Health	7.0%	9.4%
Orbital Energy	5.0%	8.8%
Sakura Consumer	6.0%	8.0%

Performance

Since 2020-09-07 the portfolio has returned 4.0% a year against 5.6% for the benchmark, behind by 1.7% a year, with a Sharpe ratio of 0.04.

Period	Portfolio	Benchmark
MTD	-0.56%	0.28%
QTD	-0.56%	0.28%
YTD	-6.10%	-4.64%
1Y	0.80%	-2.01%
3Y (ann.)	5.37%	5.43%
Since inception (ann.)	3.98%	5.64%

Over the period the portfolio returned 0.9% against -2.2% for the benchmark. Asset-class choices contributed +1.1%, holding selection +2.5% and their interaction -0.4%. The biggest single contributor was Equity (+2.8%).

Stress scenarios

Scenario	Change	In money
Inflation and rate shock (2022-style)	-18.8%	-$1.88m
Global Financial Crisis (2008-style)	-17.6%	-$1.76m
Pandemic crash (2020-style)	-12.1%	-$1.21m
Emerging markets crisis	-6.3%	-$631,137
Technology sell-off	-3.6%	-$362,649
Rates up 1 percentage point	-2.9%	-$288,752

Scenario	Change	In money
Dollar strengthens 10%	-2.5%	-$250,128

Across 10,000 simulated years, the middle outcome is $10.76m. In 9 out of 10 cases the value ends between $9.08m and $12.81m. The chance of ending lower than today is 25%, and of losing more than 10% is 4%.

Scenario moves are illustrative approximations of past episodes, not forecasts.

Compliance

1 rule breach needs attention. 13.0% of the portfolio would take more than 5 days to sell (limit 10%).

Status	Detail
Warning	US Treasury 4.25% 2036 is 20.0% of the portfolio (limit 21%).
Warning	Energy is 5.5% of the portfolio; the rule says at most 6%.
Breach	13.0% of the portfolio would take more than 5 days to sell (limit 10%).
Warning	The portfolio holds 11 instruments (minimum 10).

Private assets

Fund	Paid in	NAV	TVPI	IRR
Summit Buyout Fund IV	$1.33m	$1.10m	1.40	10.65%
Meridian Direct Lending II	$850,000	$905,000	1.38	14.80%

Including private funds the total is $12.01m, of which 17% is private. Outstanding commitments of $320,000 could be called at short notice, against $300,000 of cash on hand.

Holdings

Holding	Class	Value	Weight
US Treasury 4.25% 2036	Fixed Income	$2.00m	20.0%
Atlas Corp 5.10% 2031	Fixed Income	$1.30m	13.0%
German Bund 2.50% 2034	Fixed Income	$1.20m	12.0%
Northwind Technologies	Equity	$1.00m	10.0%
Emerging Markets Equity ETF	Equity	$899,976	9.0%
Helix Health	Equity	$700,082	7.0%
